# Safety First

Antimicrobial and bleach-cleanable, Chilewich textiles provide peace of mind.

TURQUOISE, Mini Basketweave at Food Exchange Restaurant, Novotel Singapore on Stevens Hotel

From table mats and coasters to tray liners and Worktops, Chilewich products have always been distinguished by their easy maintenance, but did you know they're also antimicrobial and bleach-cleanable? At a time when effective

cleaning and infection prevention are more important than ever before, these high-performance features provide peace of mind.

**Integrated antimicrobial technology.** Built into all of our yarns at the polymer level, Microban® technology gives Chilewich products an added level of protection against stain- and odor-causing bacteria, mold, and mildew.

**Streamlined cleaning.** Antimicrobial protection not only extends the life of our products but also makes them easier to maintain and keeps them cleaner between sanitizations.

**Enduring protection.** The antimicrobial technology does not wash off or wear away, and will continually fight against potentially harmful bacteria that make contact with the surface of the product.

**One-step disinfection.** Kill pathogens without fear of damage or discoloration. For all woven Chilewich products, a 50:1 water/bleach solution left on the surface for at least one minute will disinfect the material. Woven products can also be wiped with an EPA-registered disinfectant. For pressed table mats, hydrogen peroxide may be used.
